

Introducing Simply Voting

This is the voting platform used by the BCAFN to conduct online voting. It makes voting online simple, convenient and secure. You can access Simply Voting on any internet connected computer, tablet, or smart phone.

A brief tutorial on how to use Simply Voting will be offered during the AGM. Below these instructions are screen shots of the steps you will see when you vote (example from the 2021 election).

How Simply Voting Works

- 1) Your registration for the BCAFN AGM included your email address as well as your status card number (or equivalent). These will be used as part of the process for you to access the ballots on Simply Voting.
- 2) Shortly after 10 am on October 9th an email will be sent to you containing a link to the voting platform as well as a password.
 - a) Links will only be sent to member delegates and proxies that were properly registered for the AGM and were present at the meeting (in person or online).
 - i) To be deemed “present” at the zoom meeting, a member delegate or duly appointed proxy must have been granted access to the Zoom meeting room.
- 3) Clicking on the link in the email will take you to the Simply Voting welcome page.
 - a) You may login using your Status Number and Password (from the email)**
- 4) If your login was successful, you will be shown the ballot.
 - a) You may select one choice on each ballot.
 - b) If you aren't able to login, contact the Electoral Officer for assistance.
- 5) Once you submit the ballot, the results are encrypted and stored in a database. Your Elector ID is then flagged as "voted" and will not be eligible to vote on this ballot again.

You may also vote by telephone. This is an automated phone system in which you will need to enter your Status Number (or equivalent) and Password (from the email) on the keypad. Each member delegate will receive an email from Simply Voting on October 9 which will include their PIN code and telephone number to access voting should they not have internet access to cast their ballot online when the election takes place.

Privacy and Security

Simply Voting was designed from the ground-up to minimize the risk of electoral fraud. Voters who bypass authentication or have already voted are denied access to the ballot, and ballots are checked for validity before being accepted. Nobody could ever find out what a particular voter has voted as the results are stored anonymously.

Communication between your computer and Simply Voting is encrypted with TLS 1.2. The servers are "hardened" and are routinely subjected to PCI Compliance security scans. Simply Voting application code adheres to guidelines set out by the *Open Web Application Security Project*.
